Module Name	Instagram - Bio & Story Caption Fields (BVA & Equivalence
Test Case ID:	st_02
Tester Name:	Saloni Ashish Tanna
Test Case Desc	To apply Boundary Value Analysis (BVA) and Equivalence Partitioning (EP) techniques to validate the character-limit input fields (Bio field and Story caption field) on the Instagram mobile application.
Prerequisites:	1. Instagram app installed on Android device 2. Stable internet connection 3. Logged-in Instagram account 4. Access to Edit Profile > Bio and Add to Story > Text tool
Environment I	OS: Android Device: Android Smartphone App: Instagram (mobile app) Fields under test: Bio (max 150 characters), Story Caption (max 80 characters)

Scenario ID	Scenario	Test Steps	Test Input	Expected Results	Actual Results	Status	Comments
BVA-1	Bio field - Lower boundary value (minimum valid input)	1. Open Instagram app 2. Go to Profile > Edit Profile > Bio 3. Enter 1 character in Bio field 4. Observe character counter	1 character (emoji)	Field accepts the input; counter shows 1/150; no error shown	Counter displayed 1/150; input accepted successfully	Pass	Validates lower boundary (min=1) under BVA; falls in valid equivalence class (1-150 characters)
BVA-2	Bio field - Valid value within equivalence partition (mid-range)	1. Open Bio field 2. Enter a value well within the valid range 3. Observe character counter	34-character text	Field accepts input; counter shows 34/150; no error	Counter displayed 34/150; input accepted successfully	Pass	Confirms valid equivalence class (1-150) behaves correctly for a typical mid-range value
BVA-3	Bio field - Valid value within equivalence partition (second mid-range sample)	1. Open Bio field 2. Enter another value within the valid range 3. Observe character counter	86-character text	Field accepts input; counter shows 86/150; no error	Counter displayed 86/150; input accepted successfully	Pass	Second sample from the valid equivalence class; confirms consistent behaviour across the class
BVA-4	Bio field - Upper boundary value (maximum valid input)	1. Open Bio field 2. Enter exactly 150 characters 3. Observe character counter and Save (checkmark) button	150-character text	Field accepts input up to exactly 150 characters; counter shows 150/150; Save button remains enabled	Counter displayed 150/150; input accepted; Save button enabled	Pass	Validates upper boundary of valid range as per BVA
BVA-5	Bio field - Invalid boundary (attempt to exceed maximum, 151st character)	1. With Bio field already at 150/150 characters 2. Attempt to type one additional (151st) character 3. Observe counter	151st character (typed after limit reached)	Field should reject/block further input; counter should remain capped at 150/150	Field remained at 150/150; extra character was not accepted; counter did not increase	Pass	Confirms field correctly restricts input beyond the upper boundary; invalid equivalence class (>150) correctly rejected
BVA-6	Story caption field - Lower boundary value (0 characters / empty input)	1. Open a photo/story on Instagram 2. Tap the text tool to add a caption 3. Leave the caption field empty 4. Observe character counter and Share button	0 characters (empty)	Story can still be shared with an empty caption; counter shows 0/80; Share button remains enabled	Counter displayed 0/80; Share button was enabled with empty caption	Pass	Validates minimum boundary (0); caption is an optional field, so empty input is a valid equivalence class
BVA-7	Story caption field - Invalid boundary (input exceeds maximum of 80 characters)	1. Open the story text tool 2. Type text well beyond the 80-character limit 3. Observe character counter	Text of approximately 138 characters (58 characters beyond the limit)	Field should block further input at 80 characters, or show an error/warning when the limit is exceeded	App allowed typing beyond the limit; counter went negative and showed -58/80; no error or input blocking occurred	Fail	Defect: Story caption field does not enforce its stated 80-character upper boundary; UI shows a negative count instead of blocking input. Needs validation fix.
