Tutorial 7 - BVA & Equivalence Partitioning

Aim: Apply Boundary Value Analysis (BVA) and Equivalence Partitioning techniques for validation testing of forms and authentication modules.

Module Name: Instagram - Bio & Story Caption Fields (BVA & Equivalence Partitioning)

Test Case ID: st_02

App: Instagram (mobile application)

Tester Name: Saloni Ashish Tanna

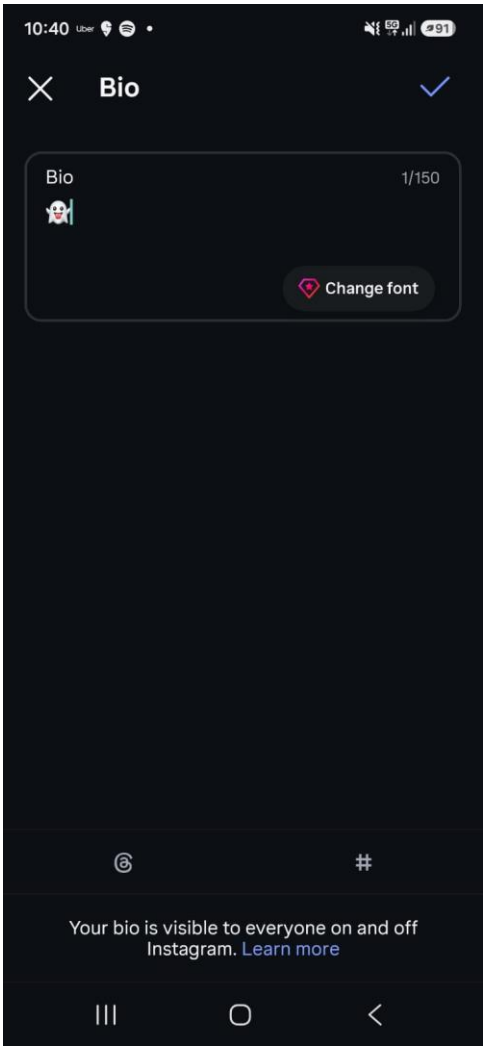

Scenario ID: BVA-1

Scenario: Bio field - Lower boundary value (minimum valid input)

Test Steps:

1. Open Instagram app
2. Go to Profile > Edit Profile > Bio
3. Enter 1 character in Bio field
4. Observe character counter

Screenshots:

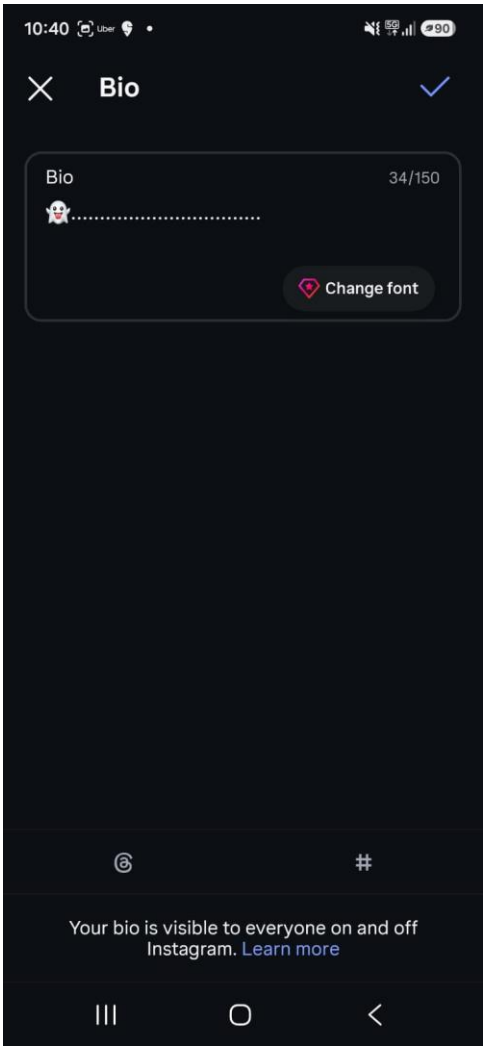

Scenario ID: BVA-2

Scenario: Bio field - Valid value within equivalence partition (mid-range)

Test Steps:

1. Open Bio field
2. Enter a value well within the valid range (34 characters)
3. Observe character counter

Screenshots:

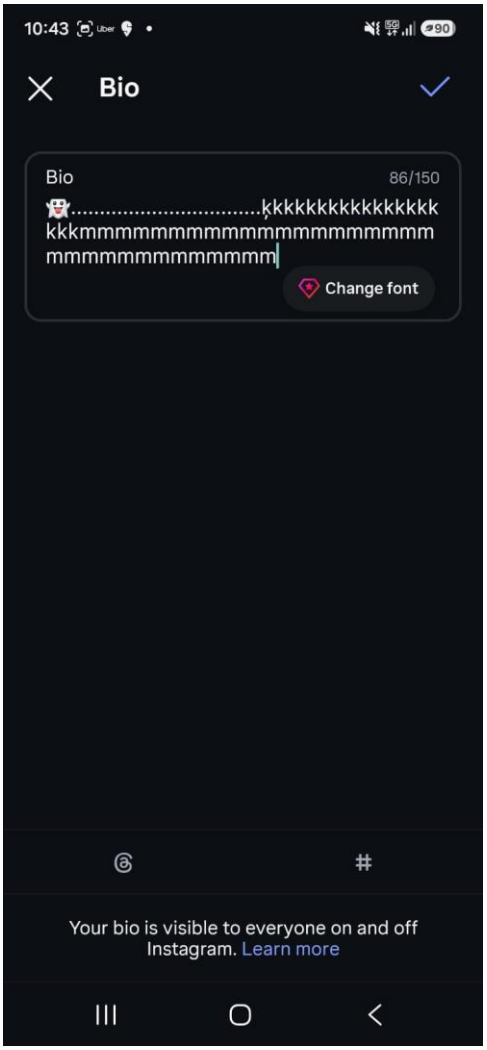

Scenario ID: BVA-3

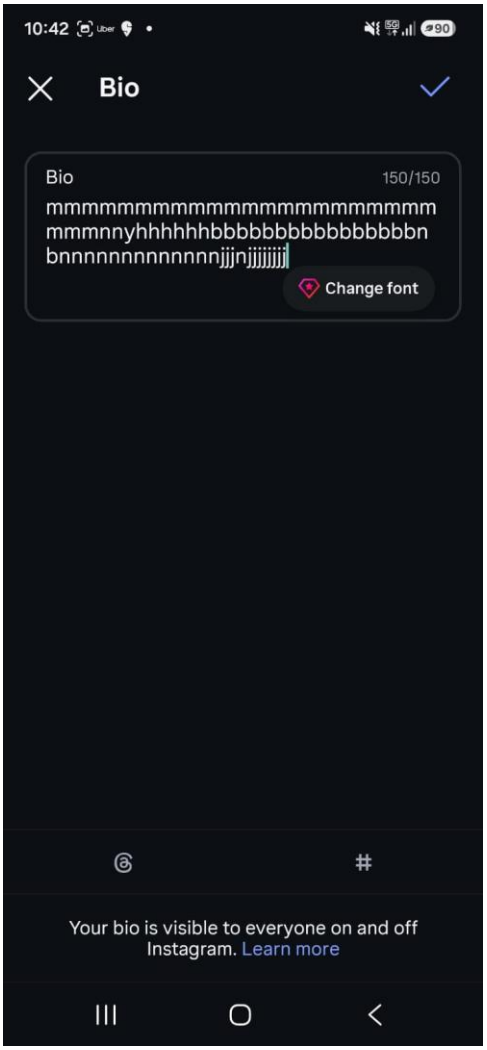

Scenario: Bio field - Valid value within equivalence partition (second mid-range sample)

Test Steps:

1. Open Bio field
2. Enter another value within the valid range (86 characters)
3. Observe character counter

kkkk

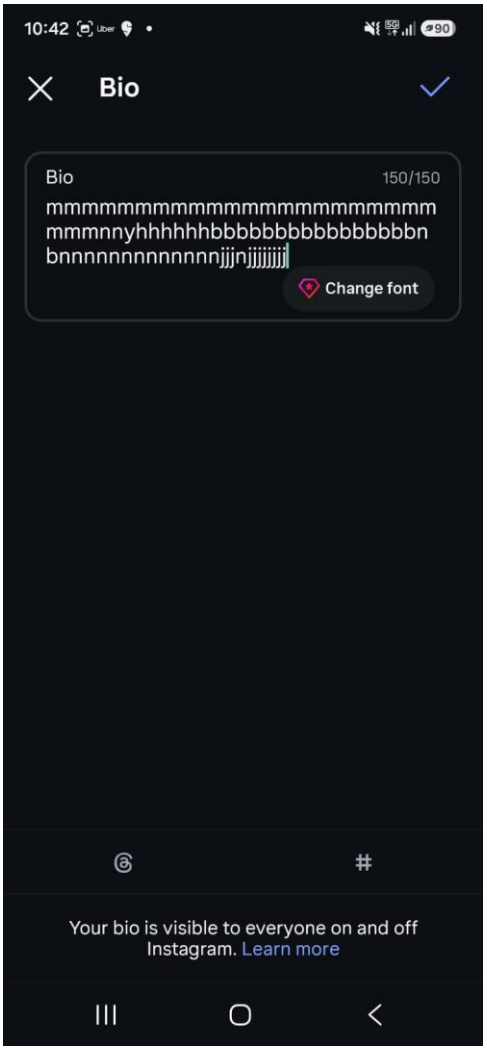

Scenario ID: BVA-5

Scenario: Bio field - Invalid boundary (attempt to exceed maximum, 151st character)

Test Steps:

1. With Bio field already at 150/150 characters
2. Attempt to type one additional (151st) character
3. Observe counter

Screenshots:

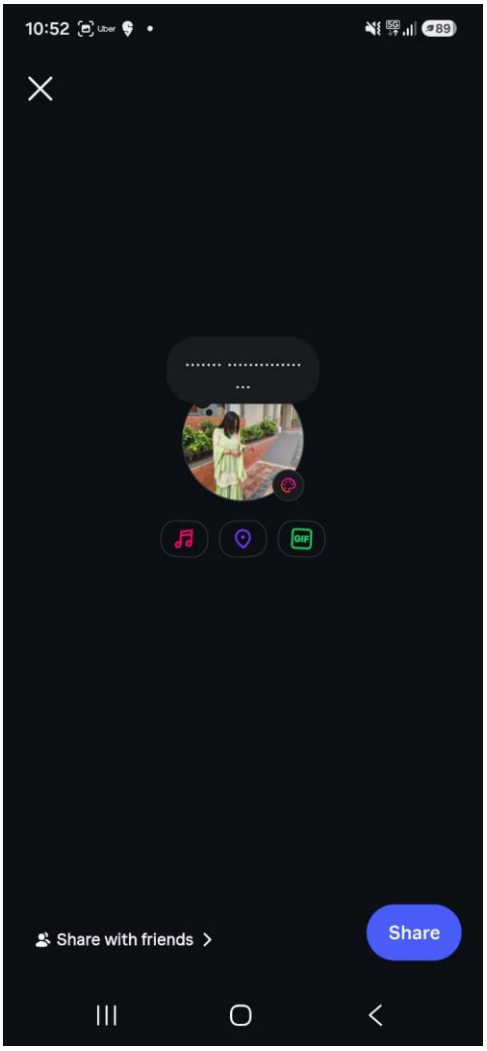

Scenario ID: BVA-6

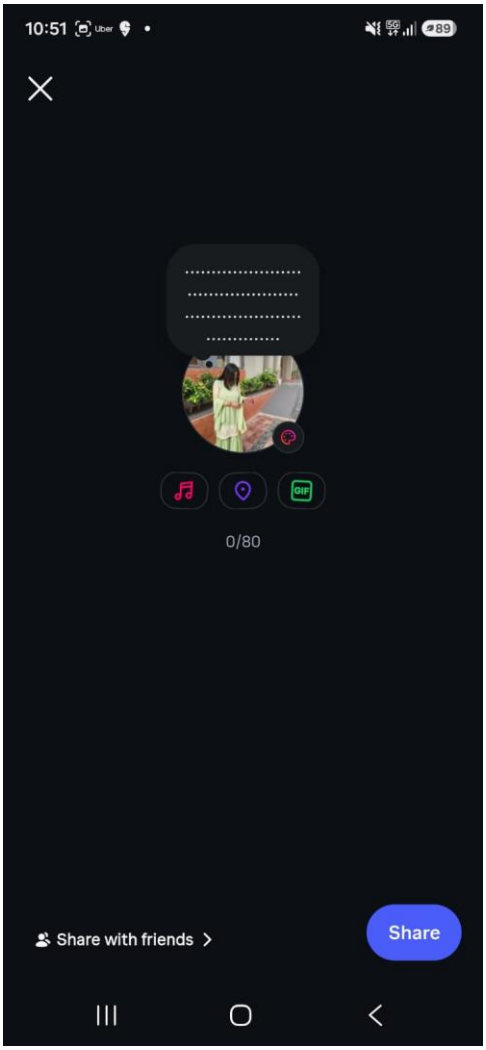

Scenario: Story caption field - Lower boundary value (0 characters / empty input)

Test Steps:

1. Open a photo/story on Instagram
2. Tap the text tool to add a caption
3. Leave the caption field empty
4. Observe character counter and Share button

Scenario ID: BVA-7

Scenario: Story caption field - Invalid boundary (input exceeds maximum of 80 characters)

Test Steps:

1. Open the story text tool
2. Type text well beyond the 80-character limit
3. Observe character counter
